

Abstract

ADAPTIVE TRANSDERMAL IONTOPHORETIC INTRODUCTION SYSTEM FOR BEAUTY FIELD

5

An adaptive transdermal iontophoretic introduction system for the beauty field. Specifically, the system comprises: an iontophoretic introduction system, and a control and drive electronic system, the control and drive electronic system comprising: an operation system, a central
10 processing system, an electrode drive system, a sensing system and a data communication system. The adaptive transdermal iontophoretic introduction system provides personalised transdermal drug delivery according to the actual condition of a user's skin, optimises the dose, depth and speed of the transdermal drug delivery in real time, and maximises the product usage
15 effect and safety.
