(54) Title: SYSTEMS AND METHOD FOR WORKFLOW EDITING

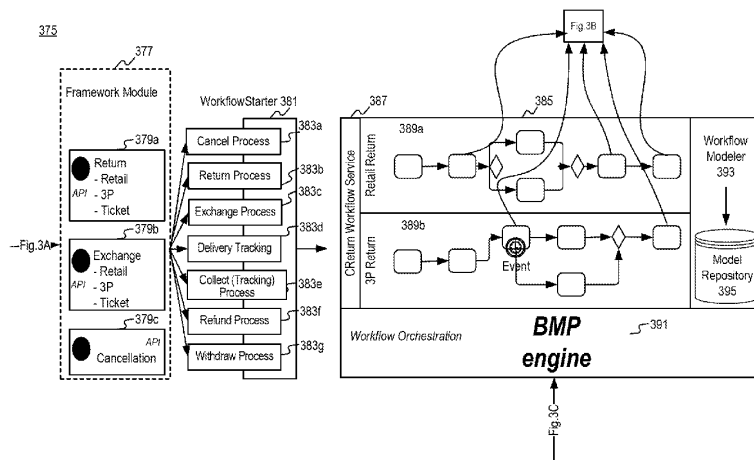

FIG. 3D

(57) Abstract: A system for editing workflows as described herein, which may include a memory storing instructions and at least one processor configured to execute instructions. The instructions may cause the processor to display, on a graphical user interface an existing workflow, wherein the workflow comprises a plurality of blocks. Edits to the plurality of blocks may be received from a user, wherein edits comprise at least edits to an individual block or an interconnection between the plurality of blocks. Further, a modified workflow based on the received edits may be created and propagated to replace existing workflows within the system. Lastly, a graphical user interface may display the modified workflows for further editing.
