ABSTRACT

SYSTEM AND METHOD FOR BLADE REFURBISHMENT

The invention provides a system amd method for blade refurbishment of one or more blades. The invention comprises one or more modification units (103, 104), which are provided with the blades. The modification units (103, 104) are configured to either remove material from a hub of each blade, remove material from at least one cutting edge of each blade, or both, for at least one parameter of each blade, which at least includes its blade exposure, to be restored to a prior or original, or to be of a modified specification.
