(54) Title: CHILD SAFETY SEAT

FIG. 31A

(57) Abstract: A child safety seat includes a seat shell and a headrest movably coupled to the seat shell. At least one frame member is associated with the seat shell and extends generally vertically. The at least one frame member has an outer portion including a plurality of lock openings formed therein, the plurality of lock openings defining predetermined vertical positions for the headrest and an inner portion having at least one opening formed therein. A headrest adjustment mechanism is transformable between a locked configuration and an unlocked configuration. In the locked configuration, the headrest adjustment mechanism engages both the at least one opening and one of the plurality of lock openings.
