(54) Title: PROCESS TO MANUFACTURE LOW SULFUR DISTILLATES

(57) Abstract: The instant invention relates to a process to produce low sulfur distillate products through the hydrotreating of distillate boiling range feedstreams in the presence of a bulk metal hydrotreating catalyst, which comprises: i) a Group VIB metal component selected from molybdenum, tungsten and mixtures thereof; ii) a Group V metal component selected from vanadium, niobium, tantalum, and mixtures thereof; and iii) a Group VIII metal component selected from nickel, cobalt, iron, and mixtures thereof, wherein the metal components, calculated as oxides, comprise at least 50 wt.% of the catalyst based on the weight of the catalysts, and wherein the molar ratio between the metal components, expressed by the formula (Group VIB + Group V) : (Group VIII), ranges from 0.35:1 to 2:1.
