(54) Title: A TOKENIZATION PLATFORM

FIG. 1

(57) Abstract: Systems, methods, platforms, and devices that generate, store, transact, transfer, exchange, and/or otherwise process digital tokens are described. In embodiments, systems, methods, platforms, and devices obtain an identifier for an item that includes a set of item attributes, generate a digital token including a set of digital attributes that correspond to the set of item attributes, and cryptographically link the digital token to one or more units of the item. The digital token may be transferred, exchanged, redeemed, or otherwise transacted, which provides both the flexibility and convenience of virtual item transactions and the reliability and value of physical item transactions.
