

Abstract

Embodiments of the present disclosure provide a paging restriction method and apparatus, a communication device and a storage medium. The paging restriction method is executed by a UE, and comprises: sending indication information, the indication information indicating whether the UE receives a paging message triggered by control plane signaling. In this way, a network side can know whether the UE is willing and/or able to receive the paging message triggered by the control plane signaling, so that the network side can accurately determine whether to send the paging message triggered by the control plane signaling.
