

ABSTRACT

An object is to ensure reliability of collected data and a calculated indicator while remarkably reducing time and effort required from people. A data audit system receives approval information indicating that approval is received from a third party for an indicator calculation rule for calculating an indicator to evaluate a project and a data collection rule for collecting data used to calculate the indicator, collects, based on the data collection rule for which the approval is received, the data used to calculate the indicator from operation information of a subject facility of the project, and calculates the indicator based on the indicator calculation rule and the collected data.
