(54) Title: TEST PROBE AND TEST DEVICE

(57) Abstract: Disclosed is a test probe for testing the electrical characteristics of a subject-to-be-tested. The test probe may include a pin unit; and a terminal unit connected to the pin unit along a longitudinal direction. One of the pin unit and the terminal unit may include an engagement extending portion extending along the longitudinal direction and including a locking portion recessed in a radial direction. The other one of the pin unit and the terminal unit may include an engagement accommodating portion that includes a skirt portion formed by a plurality of slits extending along the longitudinal direction to be elastically transformable in the radial direction, and an engagement portion formed in the skirt portion and engaging with the locking portion to prevent the engagement extending portion from separating in the longitudinal direction, and accommodates the engagement extending portion along the longitudinal direction.
