CLAIMS

1. A multi-chamber syringe comprising:

three or more chambers arranged parallel to each other and parallel to a central axis;

plungers associated with each of the chambers;

an outlet body rotatably connected to the three or more chambers such that at least a portion of the outlet body rotates around the central axis positioning an outlet in fluid communication with one of the chambers while blocking release of fluid from the other chambers; and

a cap removably covering the outlet, the cap including a sponge containing a disinfectant and one or more friction-fit sockets for storing one or more needles.

2. The syringe of claim 1, wherein two or more of the chambers contain different drugs both usable to treat a same medical condition.

3. The syringe of claim 1 or 2, further comprising a fourth chamber arranged parallel to the other chambers and to the central axis, wherein the fourth chamber contains epinephrine.

4. The syringe of any one of claims 1 to 3, wherein a volume of one or more of the chambers is from about 1 mL to about 140 mL.

5. The syringe of any one of claims 1 to 4, wherein the three or more chambers are formed from a single piece of material.

6. The syringe of any one of claims 1 to 4, wherein the three or more chambers are formed from two or more pieces of material and the chambers are fixed in position relative to each other by attachment to the outlet body.

7. The syringe of any one of claims 1 to 6, wherein the outlet body has only a single outlet.

8. The syringe of any one of claims 1 to 7, wherein the outlet body has a first portion fixedly attached to the chambers and a second portion rotatable coupled to the first portion and configured to rotate relative to the first portion around the central axis.

9. The syringe of any one of claims 1 to 8, wherein the outlet comprises a hollow needle.

10. The syringe of any one of claims 1 to 8, wherein the outlet comprises a Luer connector.

11. The syringe of any one of claims 2 to 10, wherein the medical condition is an allergic reaction and a first chamber contains epinephrine, a second chamber contains an antihistamine, and a third chamber contains a corticosteroid.

12. The syringe of claim 11, wherein a fourth chamber contains epiniephrine.

13. The syringe of claim 11 or 12, wherein the antihistamine comprises diphenhydramine.

14. The syringe of any one of claims 11 to 13 wherein the corticosteroid comprises dexamethasone, methylprednisolone, or both.

15. The syringe of any one of claims 2 to 10, wherein the medical condition is a heart attack and a first chamber contains an anti-arrhythmic, a second chamber contains a vasopressor, and a third chamber contains a pH elevator.

16. The syringe of claim 15, wherein the anti-arrhythmic comprises lidocaine.

17. The syringe of claim 15 or 16, wherein the vasopressor comprises norepinephrine.

18. The syringe of any one of claims 15 to 17, wherein the pH elevator comprises sodium bicarbonate.

19. The syringe of any one of claims 1 to 18, further comprising a plunger lock to prevent accidental operation of at least one of the plungers.
