(54) **Title:** CONTACT MATCHING METHOD, INSTANT MESSAGING CLIENT, SERVER AND SYSTEM

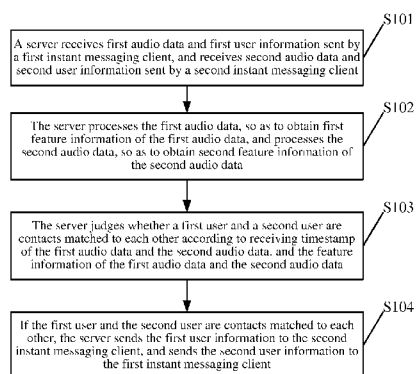

FIG. 1

(57) **Abstract:** A method of providing matching information to prospective first and second users, comprising a non-transitory computer readable medium including a program, a processor, and a computer executable program code comprises the steps of receiving, by a server, first audio data and first user information; receiving, by a server, second audio data, and second user information; storing, by the server, a first timestamp of the first audio data and first user information and a second timestamp of the second audio data and second user information; performing, by the server, analysis processing on the first audio data to obtain first feature information, and performing analysis processing on the second audio data to obtain second feature information; judging, by the server, whether the first timestamp and the second timestamp and the first feature information and the second feature information match; and if the first and second times of receipt and the first and second feature information match, sending, by the server, the first user information to the second user and sending, by the server, the second user information to the first user.
