

Claims

1. The basket according to claim 5, wherein the first and second basket parts comprise releasable fixation means (4, 5), arranged for reversibly interconnecting and non-destructively disconnecting the first and second basket parts.
2. The basket according to claim 5, wherein the first and second basket parts comprise non-releasable fixation means (4, 5), arranged for irreversibly interconnecting the first and second basket parts.
3. The basket according to claim 5, wherein the first and second basket parts comprise clickable fixation means (4, 5) for interconnecting the first and second basket parts.
4. The basket according to claim 5, manufactured by injection moulding material selected from the group consisting of a thermoplastic synthetic material, a polyolefin type plastic like polyethylene or polypropylene.
5. A basket for an orchid plant having aerial roots, the basket comprising:
 - a first basket part including:
 - a planar bottom end containing opened-ended rectangular-shaped slots,
 - a planar side wall having closed-ended rectangular-shaped slots, the planar bottom end forming a closed end of the closed-ended rectangular shaped slots; and
 - at least one planar end wall containing opened ended rectangular-shaped slots.; and
 - the planar bottom end and the planar end wall each including a first connection means located opposite the planar side wall; and
 - a second basket part including one planar side wall with rectangular-shaped slots and second connection means complementary to that of the first connection means; and

wherein when the first and second basket parts are interconnected by the first and second connection means a closed slotted planar bottom end is formed.
