(54) **Title:** A PROBE FOR TESTING ELECTRICAL PROPERTIES OF A TEST SAMPLE

(57) **Abstract:** The present invention relates to a probe (502) for testing electrical properties of test samples (508) . The probe may comprise a body (504) having a probe arm (506) defining a proximal and an opposite distal end, the probe arm extending from the body at the proximal end of the probe arm, a first axis defined by the proximal and the distal end. Further, the probe arm may define a geometry allowing flexible movement of the probe arm along the first axis and along a second axis perpendicularly to the first axis and along a thirdaxis orthogonal to a plane defined by the first axis and second axis. plane defined by the first axis and second axis.
