(54) Title: SYSTEM AND METHOD FOR MANAGING ENTITY USER DATA

Figure 2

(57) Abstract: An account management platform for connecting an entity user and a new user on the platform comprising: one or more processors; a memory device coupled to the one or more processors; the account management platform stored in the memory device and configured to be executed by the one or more processors, the account management platform comprising instructions for receiving, by an access module, a request for access to the account management platform; determining, by the access module, whether the request is made by the entity user associated with a first ERP platform or the new user associated with a second ERP platform, wherein the first ERP platform and the second ERP platform are incompatible with each other; sending an invitation to the new user if the access module determines that the request is made by the new user; receiving, by the access module, a request from the new user to access the account management platform; receiving, by the access module, entity profile data including at least an identifying information,
