Title of Invention:

METHOD FOR PRODUCING POWDERED OIL AND/OR FAT COMPOSITION

Abstract

The purpose of the present invention is to provide a method for producing a powdered oil and/or fat composition. Specifically, provided is a method for producing powdered oil and/or fat composition containing an oil and/or fat component that includes one or more XXX-type triglycerides with specific fatty acid residue X, the method comprising (a) preparing solid oil and/or fat composition raw material containing XXX-type triglycerides; (b) heating the solid oil and/or fat composition raw material obtained in (a) at a temperature below melting point thereof to transform the oil and/or fat component in the solid oil and/or fat composition raw material into β-type oil and/or fat, thereby obtaining β-type oil and/or fat-containing composition raw material; and (c) pulverizing the β-type oil and/or fat-containing composition raw material obtained in (b) by collision among the raw materials without mechanical pulverization, thereby obtaining powdered oil and/or fat composition.
