CARD VERIFICATION SYSTEM

[ABSTRACT]

An authentication request receiving unit 111 receives an authentication request from the settlement system that has received a settlement request from a card reading terminal device. A mobile terminal information retrieval unit 112 retrieves, from a card/mobile terminal relation information storage unit 121, mobile terminal information related to the card information include in the authentication request received from the settlement system. A check request notification unit 113 notifies the mobile terminal device of a check request, based on the retrieved mobile terminal information. A check result receiving unit 114 receives a check result including acceptance or un-acceptance of the settlement from the mobile terminal device, based on an operation of a user of the mobile terminal device. An authentication unit 115 decides whether or not the settlement according to the authentication request is authenticated, based on the received check result. An authentication result notification unit 116 notifies the settlement system of an authentication result.
