

PERSON VERIFYING SYSTEM, INFORMATION PROCESSING DEVICE, PERSON
VERIFYING METHOD, AND PERSON VERIFYING PROGRAM

ABSTRACT

5 This person verifying system comprises an imaging device for imaging a plurality of
persons moving through a predetermined passageway, an information processing device
capable of executing first verification processing for verifying the persons using a facial image
of the persons imaged by the imaging device, and second verification processing for verifying
the persons using another verification method different from the verification using the facial
10 image, and a display device for displaying information relating to verification results for the
persons, wherein the information processing device displays information relating to the
verification results for persons estimated as being subjected to the second verification
processing on the display device in a different manner to that used when verification is
performed using the first verification processing.
