(54) Title: SELECTIVE COMMUNICATIONS NETWORK FUNCTIONALITY

Figure 7

(57) Abstract: Disclosed are a method, system and apparatus for use in a network of devices which can facilitate the installation of the network. In a network consisting of multiple devices, it is often necessary to use repeaters to relay communications between two or more devices that are out of range of each other. The various aspects of the present invention provide for one or more of the devices to be selectively switched to operate as a repeater.
