

Abstract

A sidelink configuration method and apparatus, and a storage medium and a terminal. The method comprises: determining a target duration for a timer according to a sending path of a first RRC message, wherein the first RRC message is a message of a sidelink sent by a first terminal to a second terminal, and the timer is used for indicating, when timing times out, that a radio link failure occurs in the sidelink; and configuring the timer according to the target duration for the timer.
