(54) Title: MICROFABRICATED INTRAVASCULAR DEVICE FOR ASPIRATION PROCEDURES

(57) Abstract: Disclosed is an intravascular device for an aspiration procedure that provides desirable pushability, torque-ability, flex-
ibility, and hoop strength characteristics. The intravascular device incorporates a stacked configuration of microfabricated cut patterns
that improve the navigability of the intravascular device during vasculature procedures. The intravascular device may also include a
channel configured to hold a radiopaque marker to aid in navigation and location of the intravascular device during a procedure.
