(54) Title: METHOD AND SYSTEM FOR INTEGRATING AGGREGATE EMISSION DATA INTO A CARBON TRADING SYSTEM

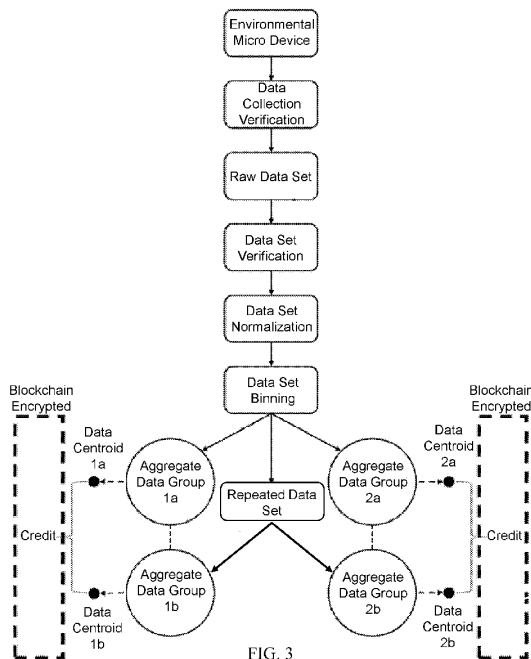

FIG. 3

(57) Abstract: One or more emissions data sets from an environmental micro-device are normalized and binned based on at least one criteria filter. One or more data groups are determined from the binned one or more data sets. A first data centroid for a first portion of the one or more data groups is determined. A portion of the one or more data sets is added to the one or more data groups and a second data centroid for a second portion of the one or more data groups is determined. A credit representing a decrease between the second data centroid and the first data centroid for the one or more data groups is then determined.
