

ABSTRACT

Provided are a panorama generation method, a network training method, apparatuses, a device, and a medium. The panorama generation method includes that: a scene description text is acquired; feature sampling is performed in a global feature book corresponding to a preset scene image set based on the scene description text to obtain a global image feature; and, feature sampling is performed in a local feature book corresponding to the preset scene image set based on the global image feature and spherical positional encoding corresponding to a preset panorama to obtain a target panorama corresponding to the scene description text.
