

ABSTRACT

A seat support unit (40) is used in a stroller (10) to support a seat (70). The seat support unit (40) has a seat support (42) to face an infant's buttocks. The seat support (42) has a pair of side frame elements (50) spaced apart from each other in a width direction, and a coupling member (60) extending in the width direction and bridged between a pair of the side frame elements (50).
