

ABSTRACT

CARGO MANAGEMENT DEVICE, CARGO MANAGEMENT METHOD, AND
PROGRAM

5 A determination is made as to whether or not a first ID is detected by a first
antenna provided at a fork of a forklift, a first tag being capable of receiving reflected
waves of a radio signal transmitted from the first antenna, the first ID being transmitted
from the first tag in response to reception of the reflected waves. A determination is
made that a container to which no cargo tag is attached is being transported when the first
10 ID is detected.
