(54) Title: IMPROVED ADHESIVE CORE FOR ATTACHING FALSE EYELASHES

(57) Abstract: An improved core (40, 120, 220, 320, 420, 520) for an adhesive device for attaching a false eyelash (12) to an eyelid (14). The adhesive device is of a type that has a core (16), an adhesive coating (18) that surrounds the core (16) so as to form an attaching element (19), a primary substrate (22) that is a card and has a face with an upper area (26) that has a display throughbore (29) therethrough for a hanging display and a lower area (28), a secondary substrate that is disposed on the upper area of the primary substrate (22), below the display throughbore (29) therethrough so as to not to interfere with hanging, and a plurality of release sheet covers (32) that are individual and separate from each other. The improvement includes the core being a plurality of synthetic fibers (42) laid side by side and not twisted, braided, interwoven, intertwined, entwined, or interlaced with each other so as to assure that the plurality of synthetic fibers (42) lay right, and are comfortable, on the eyelid (14). Each synthetic fiber is thin, smooth, and does not absorb the adhesive coating so as to remain soft and pliable,

as compared to a thread or a mono-filament which is thick, not smooth, and does absorb the adhesive coating so as not to remain soft and pliable.
