

ABSTRACT (FIG. 2)

"ELEVATOR CONTROL APPARATUS"

According to one embodiment, an elevator control
apparatus (22) includes a building shake sensing unit
5 (31) for sensing a shake of a building (10) and an
operation control unit (32) for when an amount of
shaking of the building is a given amount or greater,
restricting passengers' entry and exit operations on a
resonant floor where a rope is swayed greatly due to
10 shaking of the building, to only entry or exit, and
controlling an operation of the elevator car.
