

# **DOUBLE-FACED ADHESIVE TAPE JOINING METHOD AND DOUBLE-FACED ADHESIVE TAPE JOINING APPARATUS**

## **ABSTRACT OF THE DISCLOSURE**

An original master tape having a long carrier tape and a long double-faced adhesive tape joined thereto is guided to a knife edge to be folded back. The double-faced adhesive tape is half-cut on the carrier tape in front of the knife edge with a Thomson blade having a corresponding shape to a substrate. The original master tape is folded back at the knife edge. Accordingly, a piece of the double-faced adhesive tape cut into the substrate shape is separated from the carrier tape to be joined to the substrate traveling relatively at a speed synchronized to a separation speed.
