

[Title of Invention] UNMANNED AERIAL VEHICLE, AND METHOD FOR
USING SAME

[Document Name] Abstract

[Abstract]

5 The purpose of the present invention is to provide a highly efficient
method for capturing images inside a confined space without the need for
direct visual observation by an inspector. Provided is an unmanned aerial
vehicle equipped with at least four rotors, a drive device that drives the
rotors, a control signal generation circuit that generates a control signal for
causing the drive device to drive the rotors, and an imaging camera, wherein
said unmanned aerial vehicle is configured to fly within a confined space by
10 driving the rotors while capturing images inside the confined space by means
of the imaging camera.
