(54) Title: SAFE INSPECTION SYSTEM AND KIT

(57) Abstract: A safe inspection system for the manual inspection of personal luggage, which comprises an inspection module including at least one inspection member which defines an inspection surface, for supporting a potentially explosive object for manual inspection by an inspector; a blast containment container arranged in a position of immediate communication with the inspection module; and transfer means for effecting the immediate transfer of a suspicious inspected object from the inspection surface to the blast containment container by an inspector without requiring further handling of the object by the inspector, thereby to immediately confine the object within the blast containment container and so as to thus reduce the reduce blast damage in the event that the suspicious object explodes after confinement therewithin. The present invention also includes a kit for converting a blast containment container to a safe inspection system.
