(54) Title: LAMINATE MATERIAL FOR THE PROTECTION OF BODY PARTS AND DEVICE COMPRISING SUCH LAMINATE

162162

(57) Abstract: The present invention relates to a laminate material, comprising an upper layer (I) and a lower layer (II) which is joined to the upper layer over substantially the entire surface thereof, the upper layer (I) comprising a thin layer of leather material (1), and the lower layer (II) comprising a layer of material which can be stretched in two directions, in which laminate material the lower layer (II) comprises at least one support layer (3) which is resilient in two directions and comprises at least two sorts of interwoven fibres, at least one type of fibres being produced from an elastic substance, as well as a layer (5) of a compressible substance which is joined to the support layer over substantially the entire surface thereof and is resilient in three mutually perpendicular directions. The invention also relates to a device for protecting a body part of a human or an animal, comprising a laminate material of this type.
