

ENVIRONMENTAL LOAD MANAGEMENT DEVICE

ABSTRACT

An environmental impact management device includes an
5 emission right acquiring unit that acquires emission right
data indicating a right to emit a predetermined amount of
chemical substance, a load acquiring unit that acquires
manufacture load data indicating an amount of the chemical
substance emitted by manufacture of an article, and a use
10 fee calculating unit that calculate a use fee of the article
on the basis of a price of the emission right data and the
amount of the chemical substance emitted by manufacture of
the article.
