(54) Title: METHOD AND SYSTEM FOR COMBINING CONFIGURATION PARAMETERS FOR AN ENTITY PROFILE

(57) Abstract: A method of and system for organizing a hierarchy of sets of one or more parameters, for example, configuration parameters, maintaining the plurality of parameter sets, and combining two or more of the plurality of parameter sets to produce a single set of configuration parameters (i.e., an entity profile) for an entity, where such entity may be associated with a communications network. The generated entity profile may be used to configure a device, for example, a network device, associated with the entity.
