

ON-LINE VOICE HELP SYSTEM AND METHOD FOR AUTOMOBILE
ABSTRACT OF THE DISCLOSURE

An on-line voice help method used in an on-line voice help system includes the steps of: (a) driving an on-vehicle wireless communication module to send a current operation mode code to a wireless communication device, (b) driving a remote server to fetch the current operation mode code and then to search the corresponding voice response file from a voice response database subject to the fetched current operation mode code, (c) driving the remote server to control the wireless communication device to send the searched voice response file to the on-vehicle wireless communication module, and (d) driving a on-vehicle host to control an on-vehicle speaker to broadcast the searched voice response file.
