

ABSTRACT

APPARATUS FOR ENHANCED MESSAGING AND A METHOD FOR ENHANCED MESSAGING

5

There is provided a method for communications involving at least one text message. The method includes a sender apparatus transmitting at least one message, the at least one message including message data and at least one video filmlet; transmitting the message data over a first network and the at
10 least one video filmlet to a server on a second network; and a recipient apparatus receiving the at least one message, the at least one message being combined and generated from the message data received from the first network and the at least one video filmlet received from the server. Advantageously, the at least one message may be generated in a manner as
15 composed by a sender of the at least one message. It is preferable that the sender and recipient apparatus are able to support a data sync protocol on the second network.
