

ABSTRACT

This application discloses an information display method and apparatus, a terminal, a storage medium, and a computer program product, and belongs to the field of computer and Internet technologies. The method includes: displaying a user interface of a target application (201); displaying mandatory reading information and first prompt information corresponding to the mandatory reading information in the user interface in response to a display trigger operation (202); and displaying second prompt information corresponding to the mandatory reading information in the user interface in response to an end of a mandatory reading time (203). In this application, a user is prevented within a mandatory reading time from triggering a trigger operation to which a client needs to respond, processing overheads of detecting trigger operations by the client are reduced, and the user is prevented from getting upset about not being able to determine whether the mandatory reading time has ended, thereby improving user experience.
