

Abstract

Method and Device for Transmitting Uplink Signals

The present application provides a method and device for transmitting an uplink signal. The method includes: determining, by a terminal device, a target downlink resource for transmitting a target downlink signal among a plurality of downlink resources; determining, by the terminal device, target uplink pre-coding information according to the target downlink resource and a predetermined corresponding relationship, wherein the predetermined corresponding relationship is a corresponding relationship between downlink resources and uplink pre-coding information; and transmitting, by the terminal device, an uplink signal according to the target uplink pre-coding information. The method for transmitting the uplink signal provided by the present application may reduce signaling overhead.
