ABSTRACT

A method, an apparatus, a device, and a storage medium for expression creation are provided. The method includes: obtaining, in response to an expression creation operation, a target image input by a user, the target image including at least a face of a target object; obtaining at least one expression image of a first type, the at least one expression image being generated by using an image generation model based on at least the target image, the at least one expression image corresponding to at least one expression pattern, and each expression image including a change object corresponding to the target object; and storing the at least one expression image into an expression library associated with the user for use in a message interaction.
