(54) Title: AIR CONDITIONER

FIG. 7

(57) **Abstract:** The comfort of a user onto whom air is directly blown is enhanced when swing control for a flap is performed. A first flap in special swing control performs within a first range r1 a first action of approaching a position P4 which is a lower limit of a first rotation range RR1 until reaching a position P2 which is a lower end of the first range r1 and a second action of approaching a position P0 which is an upper limit of the first rotation range RR1 from a lower end of the first range r1 and rotates through the entire first range r1 due to at least one of the first action and the second action, and/or performs within a second range r2 a third action of approaching the upper limit of the first rotation range RR1 until reaching the position P2 which is an upper end of the second range r2 and a fourth action of approaching the lower limit of the first rotation range RR1 from the upper end of the second range r2 and rotates through the entire second range r2 due to at least one of the third action and the fourth action.
