

ABSTRACT

To reduce a transportation cost by improving transportation efficiency of a floating base for mounting solar panels. A float 10 for supporting solar panels P on the water has an opening 12, and an upright supporting section 11 that supports the solar panels P is stored inside the opening 12. Then, the floating base for mounting solar panels 1 can be transported to a setting site in a good attitude, the upright supporting section 11 being stored in the opening 12, so that the transportation efficiency can be improved and the transportation cost can be reduced.
