

OPTIMIZATION METHOD, EVALUATION METHOD AND PROCESSING METHOD AND APPARATUSES FOR DATA MIGRATION

5

ABSTRACT

The embodiments of the present invention provide an optimization method, an evaluation method and a processing method and apparatuses for data migration, wherein the optimization method includes: generating a plurality of data migration solutions according to the principle of preferentially duplicating one or more to-be-migrated data units with more first depended data
10 volume to a target cluster and then switching a computing cluster; calculating bandwidth status data between clusters after switching the computing cluster; and performing optimized selection on all the data migration solutions according to the bandwidth status data. By generating a plurality of data migration solutions according to the principle of preferentially duplicating a hot data unit with a relatively high depended data volume and then switching a computing cluster,
15 performing predictive evaluation on each of the solutions based on bandwidth status data, and then performing optimized selection, the optimization method for data migration according to the embodiments of the present invention can obtain a preferred data migration solution, improve the efficiency of data migration, and reduce the risk of data migration failure.
