(54) Title: A CLAMPING DEVICE

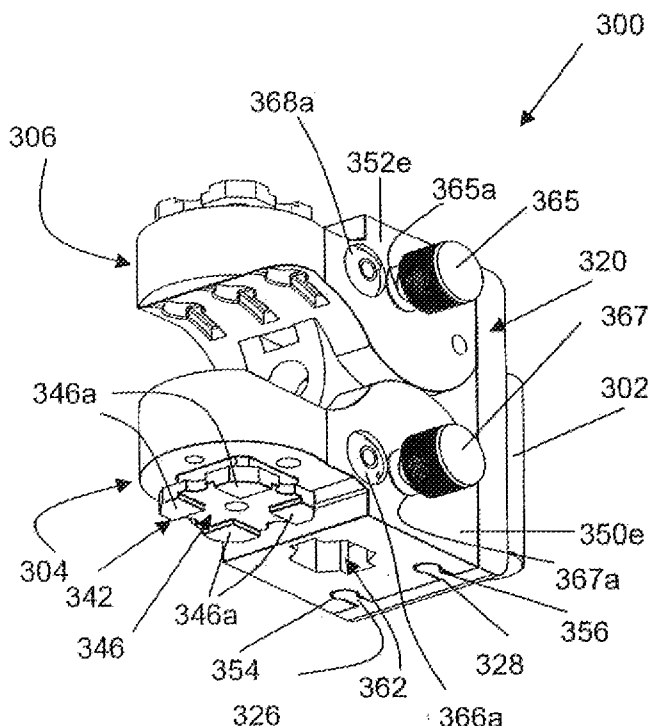

Figure 3

(57) Abstract: A clamping device (300, 700) for clamping to a support structure (1100,1200,1300) is disclosed herein. In a specific embodiment, the clamping device (300) comprises first and second clamping jaws (304, 306) movable linearly relative to each other for clamping or unclamping from the support structure (1100, 1200, 1300); a rotatable handle (302) for controlling the relative linear movement of the first and second clamping jaws (304, 306); and a translation mechanism (308) configured to translate the rotation of the handle (302) into the respective linear movements of the first and second clamping jaws (304, 306).
