(54) **Title:** IMMUNOGLOBULIN-LIKE MOLECULES DIRECTED AGAINST FIBRONECTIN-EDA

(57) **Abstract:** The present invention is concerned with immunoglobulin (Ig)-like molecules or fragments thereof for use in treatment, prevention, or prevention of progression of adverse cardiac remodelling and conditions resulting from or relating to pressure-overload, such as heart failure, aneurysm formation and remote myocardial fibrosis and for use in improving angiogenesis, preferably after ischemic injury. The invention also provides nucleic acid molecules encoding said Ig-like molecules, vectors comprising same, and host cells comprising same.
