101 When a first terminal where a user logs in to a target application is in a state of a multimedia call, in response to the triggering of a target multimedia call to be established that is associated with the user, determine whether a second terminal is in a multimedia call according to terminal identification information of the second terminal where the user logs in to the target application

102 In response to the second terminal being not in a multimedia call, establish the target multimedia call on the basis of a call pick up operation executed by an initiated party of the target multimedia call

(57) Abstract: Disclosed in embodiments of the present disclosure are a method and apparatus for establishing a multimedia call, and an electronic device. A specific embodiment of the method comprises: when a first terminal where a user logs in to a target application is in a state of a multimedia call, in response to the triggering of a target multimedia call to be established that is associated with the user, determining whether a second terminal is in a multimedia call according to terminal identification information of the second terminal where the user logs in to the target application; and in response to the second terminal being not in a multimedia call, establishing the target multimedia call on the basis of a call pick up operation executed by an initiated party of the target multimedia call. According to this embodiment, the user conducts a multimedia call by means of the second terminal and the first terminal at the same time.

(57) 摘要: 本公开的实施例公开了建立多媒体通话的方法、装置和电子设备。该方法的一具体实施方式包括: 在用户登录目标应用的第一终端处于多媒体通话的状态下, 响应于与用户关联的待建立目标多媒体通话被触发, 根据用户登录目标应用的第二终端的终端标识信息, 确定第二终端是否处于多媒体通话中; 响应于第二终端未处于多媒体通话中, 基于目标多媒体通话的被发起方所执行的接通操作, 建立目标多媒体通话。该实施方式实现了用户同时通过第二终端和第一终端进行多媒体通话。
