A FOLDABLE SHOULDER REST OF TELEPHONE HANDSET

ABSTRACT

This invention relates to a telephone handset shoulder rest which consists of a long plate, a short plate, a movable plate and a free pad. The long plate is hinged at the body near the receiver while the short plate is hinged on the movable plate which is secured on the bottom of the recess, and a free pad is hinged to the free end of the short plate. The long plate, short plate and free pad form a foldable shoulder rest which lies inside the recess of handset body when folded down, and erects from the body when unfolded. So that the two plates form a supporter which can clamp on user's shoulder and support the handset staying on user's shoulder firmly. This shoulder rest will not spoil the aesthetics of telephone handset in appearance and yet which is comfortable and more secure when in use.

Keyword: Telephone, Shoulder rest, foldable.
