

FILL-IN FORM PROVIDING DEVICE, IMAGE FORMING DEVICE, AND PROGRAM**ABSTRACT**

A fill-in form providing device includes : a transmission section that transmits information of a user interface for a fill-in form to an image forming device in response to an acquisition request to acquire the user interface issued from the image forming device; a printing instruction section that instructs the image forming device to print a fill-in form associated with the user interface for the fill-in form, in response to a printing request to print the fill-in form based on an operation of the user interface for the fill-in form in the image forming device; a reception section that receives image data, which is generated through image reading based on the operation of the user interface for the fill-in form in the image forming device, and storage destination information; and a storage processing section that executes processing for storing the image data in the storage destination.
