

ABSTRACT

METHOD FOR GENERATING CUSTOM INDEX, INDEX EDITOR, ELECTRONIC DEVICE AND STORAGE MEDIUM

The present application provides a method for generating a custom index, an index editor, an electronic device and a storage medium. The method includes: determining at least one first-order operator, and determining a data processing rule corresponding to each first-order operator in the at least one first-order operator, the first-order operator being an index of basic category or custom category; and generating the custom index based on the at least one first-order operator and the data processing rule corresponding to each first-order operator, and the custom index being of custom category; the custom index can serve as the first-order operator, to generate a new custom index. The present application can create a custom index, to meet data analysis requirements of different industries and fields.
