

ABSTRACT

A method for use in power generation and an associated apparatus

In accordance with the present inventive concept, there is provided a method
5 for use in power generation. The method comprises bringing a first target
matter via wave resonance into a higher energy state by exposing the first
target matter to electromagnetic radiation input energy for producing a first
isotope shift in the first target matter and neutrons resulting from the first
isotope shift, and capturing the neutrons by a second target matter for
10 producing a second isotope shift in the second target matter and
electromagnetic radiation output energy. Furthermore, the present inventive
concept also relates to an associated apparatus.
