(54) Title: TRANSMISSION AND RECEPTION DURING A RADIO RESOURCE MANAGEMENT MEASUREMENT PERIOD

Figure 1

(57) Abstract: Various aspects of the present disclosure relate to transmission and reception during a radio resource management measurement period. A user equipment (UE) can be configured to have one or both of data transmission or reception (TX/RX) during a radio resource management (RRM) measurement period if a down-link control information (DCI) schedules such TX/RX overlapping with the RRM measurement period. Accordingly, if the UE receives from a network equipment (NE) a DCI scheduling data TX/RX that overlaps with a RRM measurement period in the time domain, the UE interprets the DCI as an indication from the NE to not perform measurements in the RRM measurement period, and to perform the scheduled TX/RX during the RRM measurement period.
