ABSTRACT

A method for cell reselection is provided and includes: obtaining a reference distance of a cell and determining an actual distance between a terminal and a center of the cell; and performing cell reselection based on the reference distance and the actual distance.~~The present disclosure relates to a cell reselection method, a cell reselection apparatus, and a storage medium. The cell reselection method comprises: acquiring a reference distance of a cell, and determining the actual distance between a terminal and the center of the cell; and performing cell reselection according to the reference distance and the actual distance. By means of the present disclosure, cell reselection can be performed in combination with the distance between a terminal and a cell, such that the present disclosure can be applied to cell reselection of an NTN with a large cell radius.~~
