

ABSTRACT

Embodiments of the present application provide an image deduplication processing method, an image deduplication processing apparatus, a storage medium, and an electronic device. The image deduplication processing method comprises: determining a template image from among
5 multiple sample images; for each sample image among the multiple sample images, acquiring a spectrogram of the image to be processed; based on the spectrogram of the image to be processed and a spectrogram of the template image, determining a degree of frequency similarity between the image to be processed and the template image; based on the degree of frequency similarity, determining a total degree of similarity between the sample image and the
10 template image; on the basis of the total degree of similarity of each sample image among the multiple sample images with the template image, determining a preset number of target images among the multiple sample images. This not only ensures the accuracy of image deduplication processing, but also ensures processing speed and improves real-time performance.
